give me code for each question with full question and output also for separate question

Here are the solutions for some of the questions from your cycle sheet, including code and expected output for each question.

**1. Write an R program that prints numbers starting from 10 and decreasing by 2 each time, until the number is less than or equal to 0.**

Code:

```
r                                                                    Copy code

# R program to print numbers decreasing by 2
number <- 10
while (number >= 0) {
  print(number)
  number <- number - 2
}
```

Output:

```
csharp
```

Copy code
